

CHARACTERISTIC CURVES  
Models: SGLD3, SGLWD3

Page Number	801-024
Effective	Dec 2016
Replaces	Oct 2001
Section	801
SGL PUMPS	

**NOTE:** Blackmer Characteristic curves are based on Brake Horsepower (BHP). To determine Motor Horsepower, drive train inefficiencies must be added to the BHP.

These curves are based on approximate delivery rates when handling various special liquefied gases. The ranges shown attempt to illustrate the differences expected when compensating for the distinct physical properties of liquefied gases. The difference in deliveries is not a pump characteristic but is caused by natural thermodynamic phenomena of liquefied gases. Line restrictions - such as excess flow valves, elbows, etc., will adversely affect deliveries.
